Let's Get on the Magic School Bus! Ms. Frizzle’s taking the class on a trip inside the Human Body - and not just anybody either - we are going to see inside Arnold!! So grab your coats and get ready to “get on the Magic School Bus.”

To play the Magic School Bus, you will need to get the CD-Rom. Insert the CD into the disk drive. Click on the hard disc. Find a file named MS Kids. Click on it. Find the Magic School Bus icon and click on it. Now you should be all set to play !!!!!

**BEGINNER LEVEL:**
Explore Ms. Frizzle’s Science Classroom. Can you discover what 10 different things in the classroom do? Double click on objects to see them move. When you find out how they move, challenge yourself by playing the skeleton game in the back left corner.

Now it’s time to go Inside the Human Body! Double click on the school bus sitting on Ms. Frizzle’s desk. You can either create a driver’s license in your own image or be as zany and wacky as you want!

**GOOD LEVEL:**
Are you ready to explore? Go ahead and take a field trip of 10 different body parts. Make sure you click on the bus’ mirror so that you can go to the back of the bus. For each body part you explore, you must click on at least 3 of the students riding in the bus. They will teach you all about the human body.

**Activity:** To go to Expert Level, you must first make a small crossword puzzle using 5 different body parts as your answers. Remember to write hints for the answers! You can either draw this or use a computer program to create it. When you finish, send it to The Wiz or another 5D and see if they can figure it out!

**EXPERT LEVEL:**
Wow!! You are an Expert! If you can complete this next level, you might want to think about becoming a doctor some day!

Devise a route through the body. You can choose Digestive, Circulatory, or Respiratory. If you don’t know these words, ask your college buddy to explain them to you. For example, if you choose Digestive, you must try to figure out where your food goes after you eat, where is it digested, where do the vitamins and minerals go, and where is it expelled from the body? Ask your partner to help you plan the route you choose to take..

**Activity:** Take the route you created and explain it in an e-mail to the Wiz.
